- 4. Stakeholders and Ownership
- 5. Personas and Journeys
- 6. Functional Requirements
- 7. Business Rules
- 8. Non-Functional and Compliance Needs
- 9. KPIs and Acceptance
- 10. Assumptions, Dependencies and Risks

Note: Page references are represented by section numbering to preserve stability across approved revisions.

# 1. Purpose and Scope

Defines the Karnataka pilot baseline for farmer-centred Kisan Credit Card enablement, benefit visibility, consent-driven data exchange, grievance handling, fraud protection and programme oversight.

In scope: farmer mobile experience, assisted service, participating-bank workflow, Government command centre, authorised integrations and operational reporting.

# 2. Guiding Principles

Kannada-first and low-literacy friendly; reuse verified information; explicit purpose-bound consent; least privilege; interoperability through adapters; configurable workflows and auditability.

The bank remains the final credit decision-maker. Government-originated and bank-originated data retain their source and provenance.

# 3. Business Context and Outcomes

KCC journeys are fragmented across records, branches and service channels. KisanKavach provides a single guided journey without replacing statutory systems or a bank's credit authority.

Target outcomes: reduced application friction, better completion, transparent status, earlier exception handling, improved SLA visibility and trustworthy benefit/fraud communication.

# 4. Stakeholders and Ownership

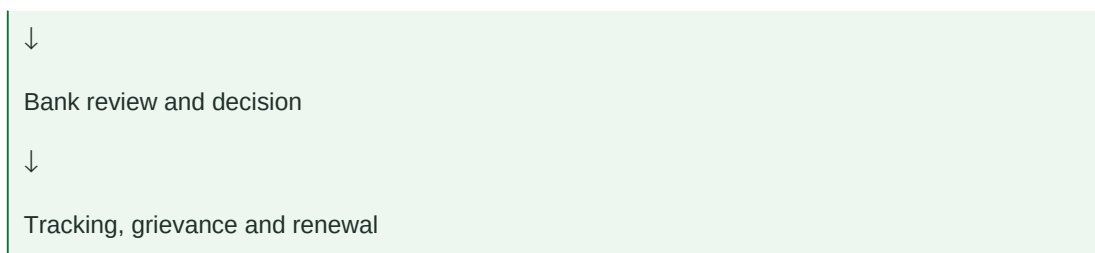

Primary stakeholders are farmers, assisted-service operators, bank officers and managers, Karnataka programme officers, integration owners, security operations and auditors.

| Capability                      | Accountable owner            | KisanKavach role                       |
|---------------------------------|------------------------------|----------------------------------------|
| Credit decision                 | Participating bank           | Application orchestration and status   |
| Farmer/land/crop source records | Authorised Karnataka systems | Consent-based retrieval and provenance |
| Programme oversight             | Karnataka Government         | Aggregated dashboards and escalation   |
| Platform operations             | KisanKavach operator         | Availability, security and support     |

# 5. Personas and Journeys

Farmer: discover eligibility, prefill verified details, apply, upload, track, respond and complain. Bank officer: receive, verify, request information, assess and decide. Government officer: monitor service performance and systemic issues.

## 6. Functional Requirements

| ID     | Requirement                                                             | Priority |
|--------|-------------------------------------------------------------------------|----------|
| BR-001 | Kannada and English authentication with OTP and secure session controls | Must     |
| BR-002 | Consent-based retrieval of farmer, land and crop information            | Must     |
| BR-003 | Guided KCC eligibility and application wizard                           | Must     |
| BR-004 | Document validation, safe storage and bank requests                     | Must     |
| BR-005 | End-to-end status timeline, alerts and SLA exceptions                   | Must     |
| BR-006 | Bank work queue, appraisal status and decision capture                  | Must     |
| BR-007 | Government dashboards, grievances and programme analytics               | Must     |
| BR-008 | Benefit and insurance visibility with source labels                     | Should   |
| BR-009 | DigiKavach-aligned fraud warnings and reporting                         | Should   |
| BR-010 | Renewal reminders and repeat application reuse                          | Should   |

## 7. Business Rules

Only verified or farmer-confirmed data may be submitted; every external field records source and retrieval time; one active application per configured product/bank rule; changes after submission are versioned; decisions require structured reason codes; consent denial routes to an allowed manual alternative.

## 8. Non-Functional and Compliance Needs

Availability target 99.9% for pilot production; responsive farmer interactions under three seconds excluding external latency; encrypted transit and storage; accessible design; complete audit for sensitive actions; retention and deletion aligned to approved policy.

## 9. KPIs and Acceptance

| Measure                | Pilot target / interpretation                           |
|------------------------|---------------------------------------------------------|
| Application completion | Increase completed submissions against started journeys |
| Turnaround             | Measure median and percentile time by bank/branch/stage |
| Data reuse             | Share of applications using verified prefill            |
| Farmer clarity         | Status comprehension and support-contact reduction      |
| Grievance closure      | Closure within configured category timelines            |
| Security               | No unresolved critical findings at go-live              |

Go-live requires signed UAT, security approval, operational readiness, partner runbooks, rollback arrangements and accountable owner acceptance.

## 10. Assumptions, Dependencies and Risks

Dependencies include authorised FRUITS/land/crop access, bank participation, notification providers, policy decisions and support staffing. Key risks are integration delay, data mismatch, digital exclusion, consent confusion, branch adoption and sensitive-data exposure; each requires an owned mitigation and tracked residual risk.
